

Responsible Use of Artificial Intelligence-Based Features

The Client undertakes to use any features of the Service that incorporate artificial intelligence systems or components in a diligent, proportionate, and lawful manner, consistent with good faith contractual conduct, in accordance with the intended purpose for which such features have been made available, as well as with the technical documentation and usage instructions provided by SESAME.

The Client acknowledges that it acts as the responsible party for the use of the system within the scope of its professional activity and assumes responsibility for any consequences arising from use that does not conform to the intended purpose.

AI features must be used exclusively for their intended purpose. Any use that could alter their operation, purpose, or conditions of use is strictly prohibited.

The following are expressly prohibited: (a) any abusive, fraudulent, or disproportionate use; (b) unauthorized automated use; (c) mass or repeated use that does not correspond to normal use of the Service; (d) use intended to generate content, interactions, or results in an artificial or manipulated manner.

These prohibited uses include, but are not limited to, the repeated or artificial generation of content, publications, job postings, communications, or any other results through anomalous usage patterns, bots, scripts, unauthorized automations, or similar mechanisms.

The Client acknowledges and accepts that SESAME may establish technical, operational, or security limits on the use of AI-based features, including limits on interactions, queries, or generations.

In particular, SESAME may set daily usage limits (for example, a maximum number of interactions), upon exceeding which: (a) the affected feature may be automatically restricted for the corresponding period; (b) an informational notice may be displayed on the platform; (c) account administrators will be notified.

The Client accepts that such limits are necessary to ensure the security, integrity, availability, and sustainability of the Service, as well as to prevent fraud or abusive use.

The Client acknowledges that: (a) AI features are shared resources subject to technical capacity constraints; (b) availability may be affected by usage volume; (c) the application of limits does not constitute a breach of contract.

The Client undertakes to use the features under adequate human supervision and acknowledges that: (a) the system does not replace human decision-making; (b) results must be reviewed before use.

In the event of detection of anomalous or abusive use, SESAME may take proportionate measures, including: (a) temporary restriction of use; (b) feature blocking; (c) suspension of access; (d) cancellation of the service in serious cases.

SESAME shall not be liable for: (a) interruptions or limitations resulting from the application of technical limits; (b) restrictions arising from abusive or non-compliant use; (c) effects resulting from the temporary unavailability of features due to usage threshold overruns.

These terms supplement the General Terms and Conditions, the AI-Specific Terms and Conditions, and the Service Documentation.
